Team Formation Manager for Group Work

By Louis Thomas, Ethan Koutsoumbi, Ben Sweeney, Oak Soe Aung, Lee Shang Wei and Dave Koffi

Our Team

LOUIS THOMAS

- 4 years python experience
- 3 years SQL experience
- 3 years C++ experience
- 3 years Unity game development

ETHAN KOUTSOUMBI

- 4 years python experience
- 2 years SQL experience
- 2 Years Unity Game / c# high level development

BEN SWEENEY

- 5 years python experience
- 2 years SQL experience
- 1 year react/node experience

LEE SHANG WEI

- 4 years of exposure to Python and Java
- 4 years of SQL and database experience
- 4 years of HTML/CSS experience

DAVE KOFFI

- 3 years python experience
- 2 years SQL experience
- 4 years of exposure to html
- 1 year Dart experience

OAK SOE AUNG /AIDEN

- 2 years python experience
- 2 years HTML/CSS
- 1 year GDScript
- 1 year SQL and database experience

Teamwork

Discord Server:

We have set up a discord server to discuss systems, have online calls when we can't meet in person and notify the rest of the team when pushing commits to Github.

This will allow us to have a stronger papertrail to record project contributions.

Project Idea

1. Problem

Manual team formation becomes difficult when balancing students with different background and criteria.

2. Existing Solution

- Comprehensive Assessment of Team Member Effectiveness (CATME)

CATME

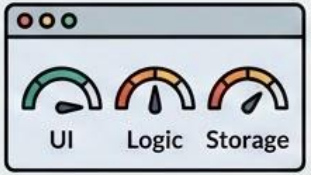

3. Our Differences

- Software-development focused
- Weighted criteria
- Transparent team comparison dashboard

4. Complexity

- UI | Medium
- Logic | High
- Storage | Medium

Implementation Strategy

Flutter Based Front End:

Team members use an app to create and log into a profile with their skills, known languages, time developing etc. As well as allow Professors to submit projects that teams need to complete along with the skills and languages needed to complete them.

SQL Database:

The team members and project information is stored in an SQL database. As well as information on teams once they are formed. Passwords will have a basic encryption

Team assembly Formula:

There will be different formulas of matching teams together by their strengths or weaknesses, as well as assembling a team around a project, this algorithm will be coded in dart as part of the flutter front end.

Our Team

Louis Thomas

- 4 years python experience
- 3 years C++ experience
- 3 years Unity game development
- 3 years SQL experience

Ethan Koutsoumbi

- 4 years python experience
- 2 years SQL experience
- 2 Years Unity Game / c# high level development

Ben Sweeney

- 5 years python experience
- 2 years SQL experience
- 1 year react/node experience

Oak Soe Aung /Aiden

- 2 years python experience
- 2 years HTML/CSS
- 1 year GDScript
- 1 year SQL and database experience

Lee Shang Wei

- 4 years of exposure to Python and Java
- 4 years of HTML/CSS experience
- 4 years of SQL and database experience

Dave Koffi

- 3 years python experience
- 2 years SQL experience
- 4 years of exposure to HTML/CSS
- 1 year Dart experience
